

Company _____ Location _____ Date _____

Vol 27 - No 48 MATERIAL LOADING ACCIDENT

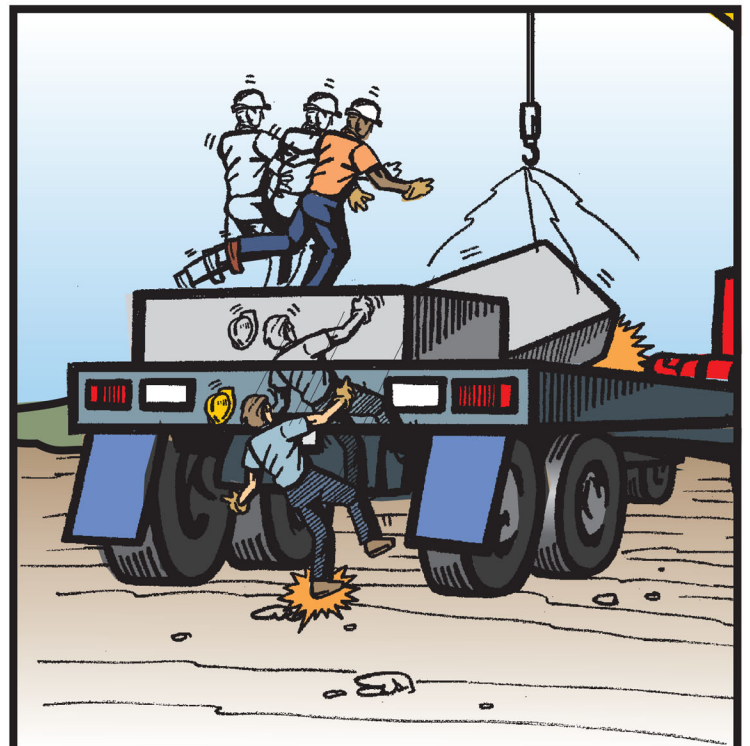

DESCRIPTION OF INCIDENT:

Several concrete precast inlet boxes were being unloaded at a job site. When the inlet box was lifted from the trailer, three of the four screws that were attached to the wire rope rigging pulled out of the concrete. The precast box weighing several thousand pounds slammed onto the trailer bouncing the two workers off their feet. One worker landed on the ground fracturing his ankle.

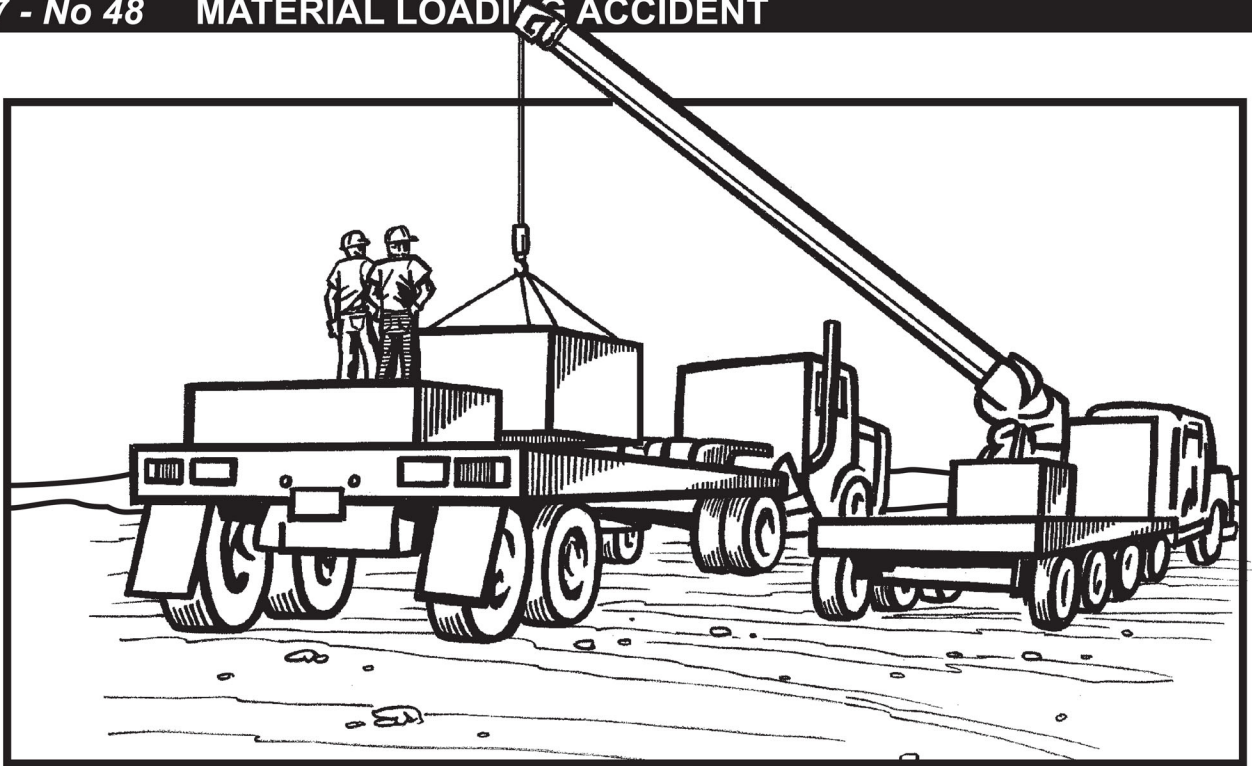

SAFETY RECOMMENDATIONS:

1. Instruct employees to stand at a safe distance from the material handling area, which includes getting down off the truck or equipment which may come in contact with material spillage.
2. It is also important to inspect rigging components before lifting to prevent such an accident from occurring
