EYE PROTECTION

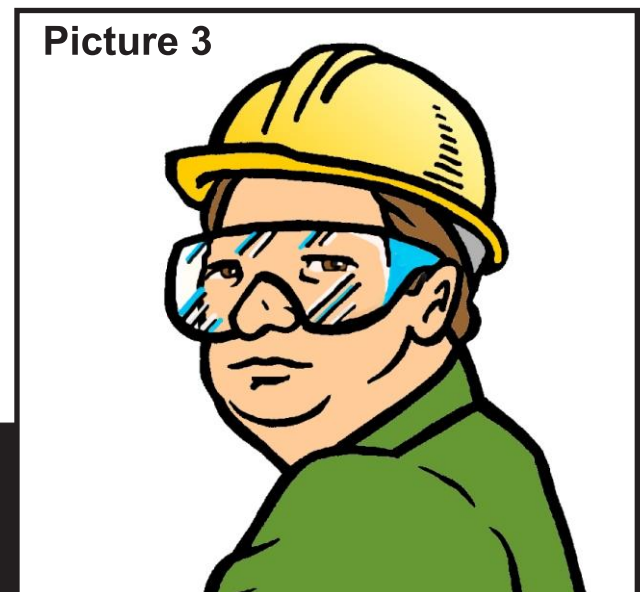

All too often workers do not take any time to assess the need for PPE. The force generated by a hammer can propel metal fragments that can penetrate skin and more importantly an eye (picture 1).

In addition, if the worker is on a ladder, the startling effect could cause him to further injure himself from a fall (picture 2). Simply by wearing safety glasses, this type of accident could possibly have been avoided (picture 3).

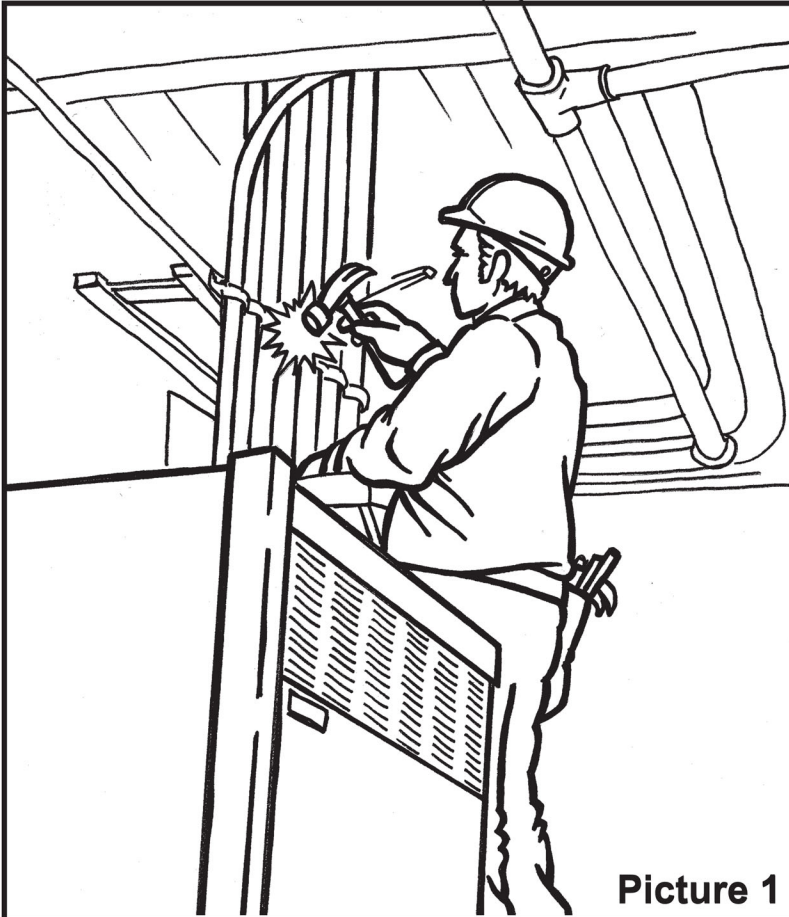

1926.102(a)(1) Employees shall be provided with eye and face protection equipment when machines or operations present potential eye or face injury from physical, chemical, or radiation agents.
