

Company _____ Location _____ Date _____

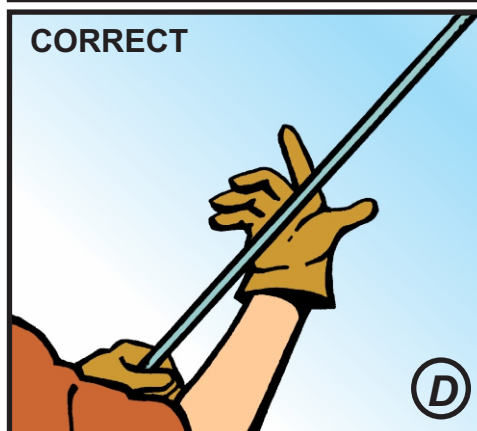

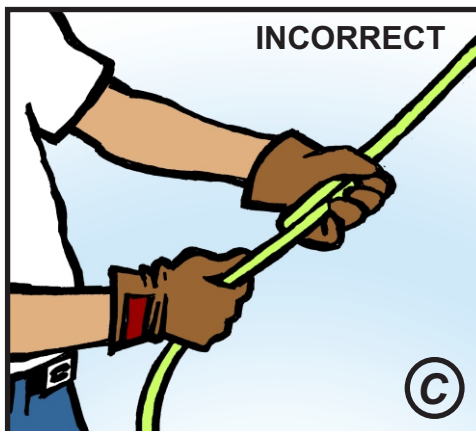

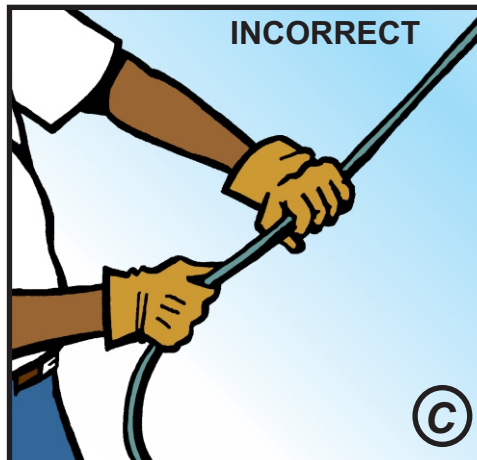

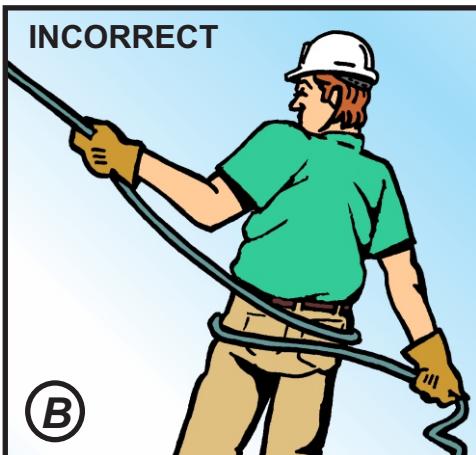

Vol 30 - No 2 TAG LINES

Hand and back injuries are two of the most common injuries sustained by workers who fail to use tag lines when attempting to manually handle heavy hoisted loads

Tag lines help to prevent losing control of loads from spinning as well as swinging back towards the boom (A). Two tag lines should be used in confined quarters.

Tag lines should never be wrapped around hands or any other part of the body (B).

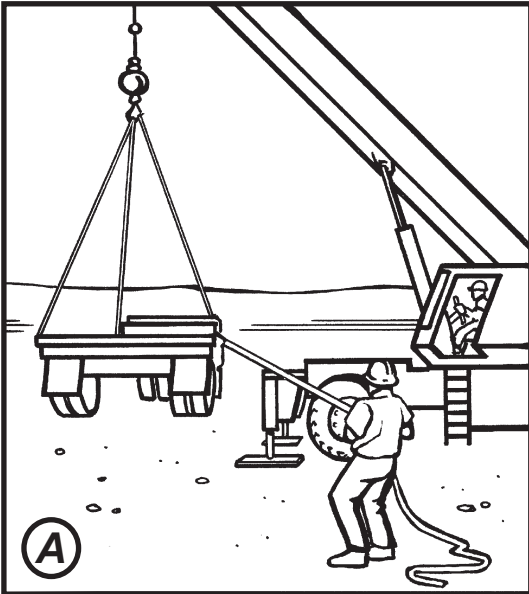

Tag lines should never be held palms down or wrapped around hand (C).

Always hold them palm up (D) in case the load is lost to avoid sustaining burn injuries to the hand. Finally, always use safety gloves when using Tag lines.

Remember to stay alert and to maintain communication with the crane operator. Tag lines, when used properly, can be a great loading and unloading tool. Used incorrectly, they can cause as much injury as if they weren't being used at all.
