Vol 31 - No 32 HAND TOOL SAFETY

PICTURE 1

INCIDENT DESCRIPTION:

Accidents can happen at any time or at any place when emphasis is not placed on prevention. When it comes to the electrical trade most think of electrical hazards, but truth be known, most accidents in this trade involve everyday routines.

Take of instance an electrician cutting a length of conduit as in picture 1. We hold the conduit in one hand and cut vigorously with the other (picture 2). Once the hacksaw cuts through, unless the arm force is not controlled in time one could seriously cut a finger on the sharp edge of the conduit (picture 3).

SAFETY RECOMMENDATION:

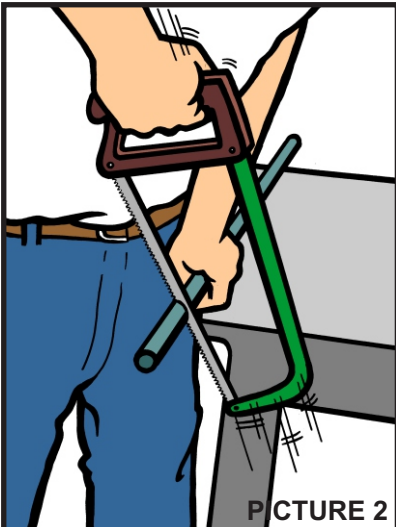

This accident occurs frequently in the electrical trade. Frequency can be reduced by making electricians aware of this problem and / or requiring leather work gloves during the cutting process.

Remember, any action on a job site can result in an accident if caution is not taken. Always be on the alert for hazards.
